PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with 3+ years designing and maintaining production SaaS platforms in Laravel and PHP. Sole developer and owner of an RFID attendance and cashless payment system processing 500+ daily transactions and over PHP 2 million in monthly volume across approximately 10 campuses and 80 field devices. Maintains core modules of a multi-tenant school management platform serving roughly 60 tenants and 60,000 students on a database-per-tenant architecture. Specialist in relational database design and query optimization, REST API development, payment gateway and hardware integration, algorithm design, and production incident recovery. Summa Cum Laude, BS Information Technology.

TECHNICAL SKILLS

Languages: PHP, SQL, JavaScript, HTML5, CSS3

Backend Frameworks: Laravel, Livewire, Filament, Tailwind CSS

Databases: MySQL, relational database design and normalization, schema migration, indexing and composite indexes, query optimization, N+1 resolution, multi-tenant (database-per-tenant) architecture, data recovery and migration

APIs and Integrations: REST API design and development, webhooks, third-party API integration, PayMongo, GCash, OpenAI API, SMTP, SMS gateways, Google OAuth, n8n, Zapier

Architecture and Algorithms: System design, multi-tenant SaaS architecture, constraint-satisfaction and greedy optimization algorithms, concurrency and race-condition handling, idempotency, background jobs and scheduled tasks

Cloud and Infrastructure: Microsoft Azure, Cloudways, Linux server administration, SSH, SSL/TLS certificates, cron jobs, staging environments, deployment

Hardware and IoT Integration: Mifare RFID readers, turnstile access control, biometric and face scanners, handheld POS terminals, QR code systems

Testing and Version Control: Laravel Dusk automated browser testing, Git, GitHub, branching workflows

Practices: Agile methodologies, technical documentation, production incident response, requirements gathering, end-to-end project ownership

Working Knowledge: Vue.js, React, Flutter, Kotlin, Java, C#

PROFESSIONAL EXPERIENCE

Rakso CT — Technology solutions company building and selling in-house SaaS products | Philippines

Product Engineer I | 07/2025 - Present

- Own end-to-end backend delivery of Tapso, an RFID attendance and cashless payment platform deployed across approximately 10 school campuses, 80 field devices, and 10,000+ enrolled cardholders, serving as sole developer from data modeling and API design through deployment and production support.
- Engineered transaction handling for 500+ daily cashless payments representing over PHP 2 million in monthly volume, implementing idempotent duplicate-detection and a 3-second tap cooldown that eliminated double-charge and duplicate-attendance defects.
- Diagnosed and resolved a total performance failure on an attendance table holding several hundred thousand rows, adding targeted composite indexes and eliminating N+1 query patterns to recover endpoints and report generation that had been timing out entirely.
- Designed and implemented a constraint-satisfaction scheduling engine from scratch using a greedy optimization algorithm enforcing teacher availability, subject hour quotas, double-period and day-restricted subjects, and zero-gap timetables, producing school-wide schedules in approximately 30 minutes versus a manual multi-day process.
- Built an OpenAI API integration that summarizes and sentiment-scores 500+ free-text evaluation records per teacher, replacing manual review with an automated scoring and reporting pipeline.

Web Application Developer | 01/2023 - 07/2025

- Maintained and extended two core modules of Schoolaide, a multi-tenant school management SaaS serving approximately 60 school tenants and 60,000 students on a database-per-tenant architecture, sustaining peak write concurrency during enrollment, grade encoding, and ID card release periods.

- Recovered a live production incident affecting an entire student cohort mid-examination: with no server access available, replicated the production database, developed and validated a data-generation command against the replica, then safely applied the corrected records to the live system, restoring service within the examination window.
- Built an automated GCash reconciliation pipeline that parses consolidated daily transaction report emails and accurately dispatches balances to individual student wallets across multiple tenant databases, eliminating a manual and error-prone daily finance process.
- Implemented webhook-based data synchronization between the Schoolaide enrollment module and the Tapso RFID platform, automatically provisioning newly enrolled students for attendance and cashless payments across system boundaries.
- Designed and built the backend for 8+ event registration platforms handling registration, payment tagging, QR-coded ID generation, and automated attendance capture, supporting national annual events of up to 6,000 attendees including the Philippine Conference on New Evangelization and the CEAP General Assembly.
- Delivered a wedding reservation SaaS for the Manila Cathedral covering the full booking lifecycle, with hardened concurrency-safe double-booking prevention across roughly 100 bookings annually.
- Integrated PayMongo payment gateway, SMTP and SMS notification services, and Google OAuth authentication across multiple production systems.
- Recognized with one promotion and three merit-based salary increases across three years of tenure.

Adamson University — Community Outreach Program | Manila, Philippines

Web Developer (Project-Based) | 01/2022 – 12/2022

- Built an informational web platform for the Dumagat-Remontado indigenous community using Laravel and Bootstrap as part of the university outreach program, improving digital visibility and public access to cultural documentation.

KEY PROJECTS

OASYS – Overall Administering System (HRIS with Payroll) | Best Capstone Award, Adamson University IT & IS Department, 2023

- Team lead and sole developer of a Laravel-based Human Resource Information System covering the complete employee lifecycle: hiring, 201 file management, attendance, training, payroll computation with SSS, PhilHealth, and Pag-IBIG statutory deductions, and post-resignation clearance.
- Architected to support organizations of up to approximately 500 employees; led a 4-member team through requirements, design, and delivery.

AI-Assisted Classroom Quiz and Flashcard Platform | 1st Place, Rakso CT Hack4Impact 2025

- Tech lead and co-developer of a platform that records live classroom lectures, processes them with AI into interactive mobile quizzes for students, and generates downloadable flashcard images for review.
- Designed the system architecture and personally built the interactive quiz engine; delivered a working end-to-end product in approximately 20 hours of continuous development.

EDUCATION

Adamson University — Manila, Philippines

Bachelor of Science in Information Technology | Graduated 07/2023

Honors: Summa Cum Laude

CERTIFICATIONS, AWARDS AND RECOGNITION

- Microsoft Technology Associate (MTA), Database Management Fundamentals — 2021
- 3rd Philippine Skilling Summit, Agile Methodologies Track — 2022
- 1st Place, Rakso CT Hack4Impact 2025 — company-wide hackathon, served as team tech lead
- 1st Runner-Up, I.T. Skills Olympics 2022, Web Design Competition — represented Adamson University against approximately 30 competing schools, hosted at the University of Makati
- Best Capstone Project, Adamson University IT & IS Department — 2023
- Summa Cum Laude, Adamson University — 2023
